Green revolution is over?

- “Unless progress with agricultural yields remains very strong, the next century will experience sheer human misery that, on a numerical scale, will exceed the worst of everything that has come before”.

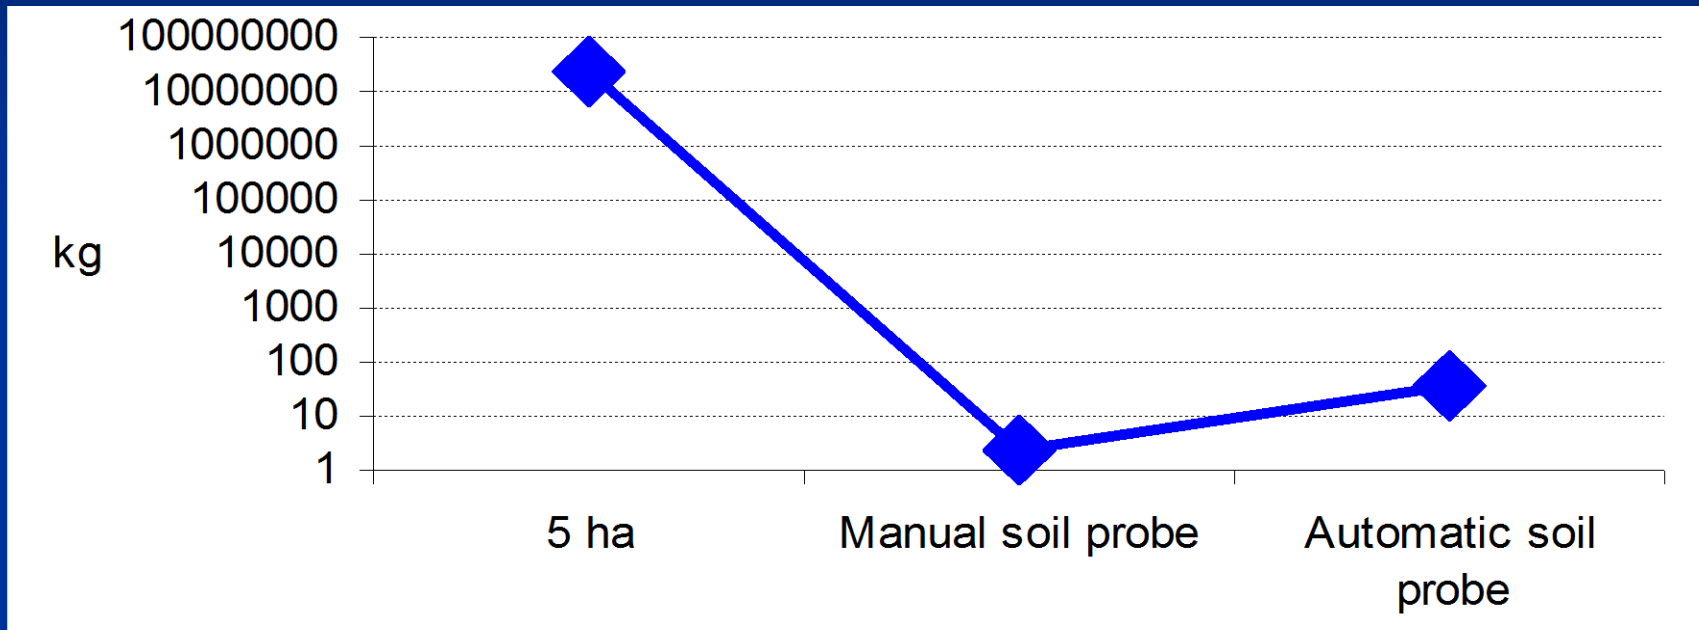

1. Introduction

- Average soil sample of 2 kg represents 22,500,000 kg of soil on 5 ha area up to 30 cm depth
- Soil sampling need to be reliable, repeatable and simple

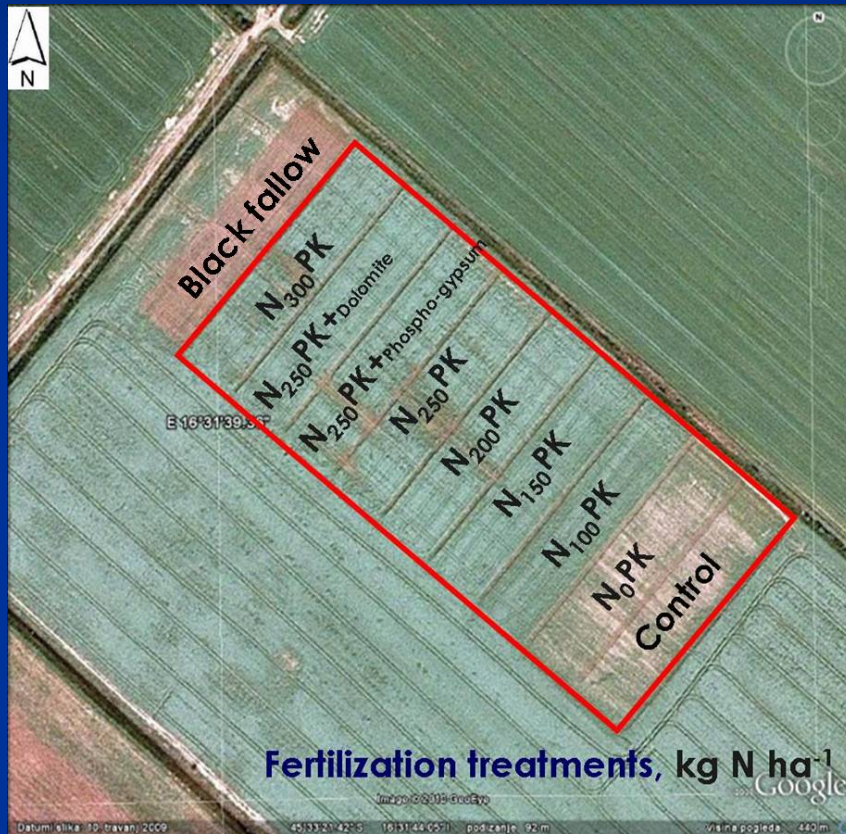

1. Introduction

Soil bulk sampled on 5 ha area with
conventional and new soil probe

(depth of 30 cm, kg)

2. Background

7. N250+P+K
+ fosfogips

10. Crni ugar
obrađa bez sjetve

From 1996

- 10 pan lysimeters
- 20 drainage pipes
- Lot of field and laboratory work

Patent pending: PCT/HR2011/000021 Rotary Soil Sampling Assembly

3. Work with new soil probe

3. Work with new soil probe

4. Methodology

- The goal of work was to get clear information about spatial variability of soil potassium content in arable layer of the 84 ha field.
- Sampling - grid sampling (50 x 50 m, at grid intersections)
- Field size - 84 ha
- Total number of samples – 330
- Precise location of sampling at grid intersection was set up Trimble GeoExplorer GeoXH 6000 with accuracy +/- 10 cm.

5. Results

- Regarding K_2O content:
 - 20 % of the field has good level of supply,
 - 40 % - rich in phosphorus,
 - 40 % - very rich in phosphorus

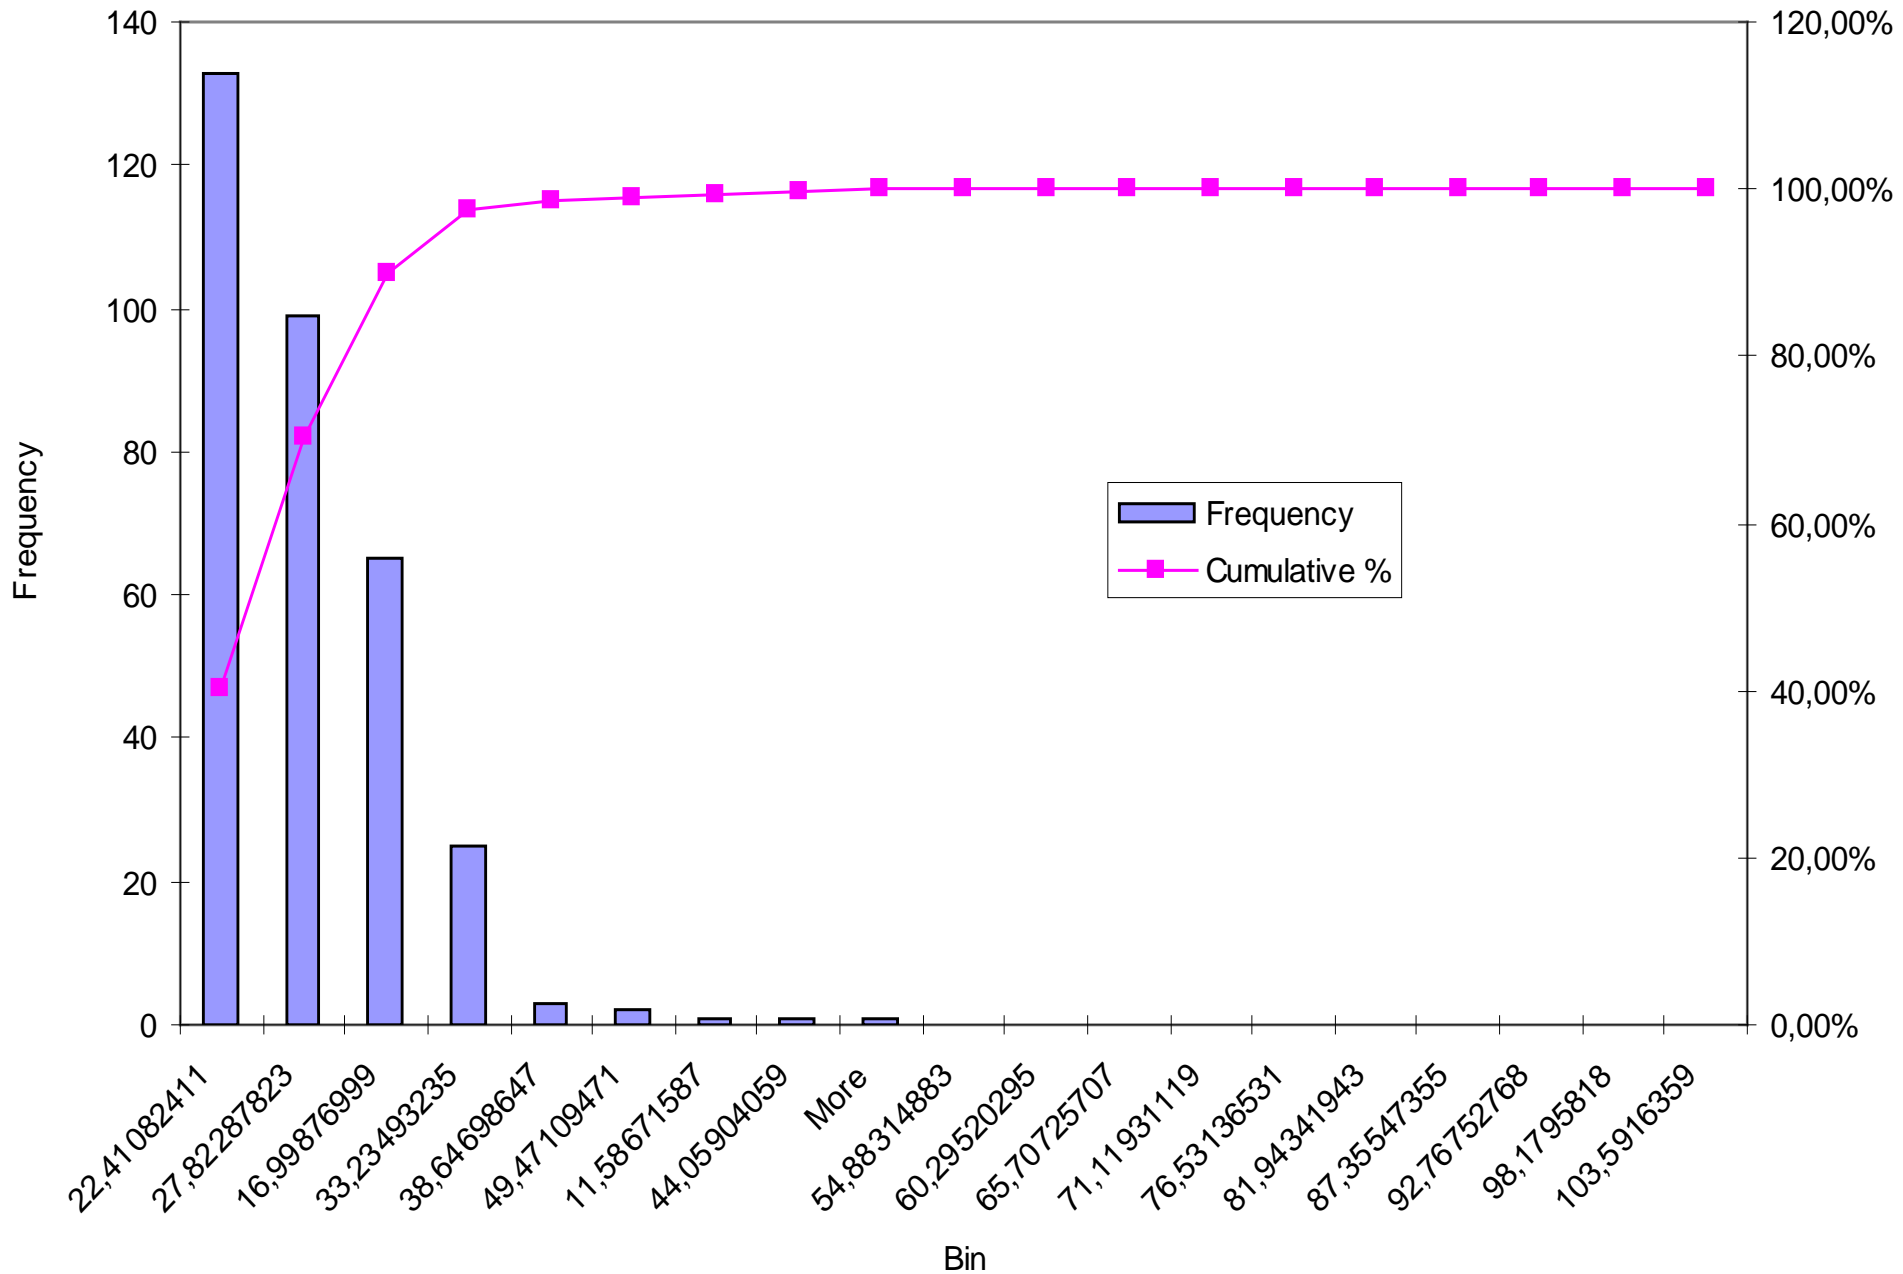

- K2O content in soil - on a larger scale
- – **84 ha field**
- – grid 50 x 50 m
- - **4 samples / 1 ha**
- - 336 samples taken in 3 days
- - each sample is recorded very precisely by GPS – can be repeated in a future

K₂O, mg/100 g tla

6. Conclusions

- Soil sampling with new circular soil probe can provide better information because of bigger volume of sampled soil and a repeatable sampling scheme.

6. Conclusions

- Based on results we can recommend variable rate fertilization with potassium but also with phosphorus.
- In a field trials we can have more precise information about different soil properties

6. Conclusions

- With the application of VRT we can make soil fertility more homogeneous, we can save fertilizers and we can maintain or improve yields.

BUILDING A SUSTAINABLE WORLD
